Two Hypotheses

Innovation does not occur by happenstance – it requires nurturing

... & ...

Water systems are no different to many others if one seeks to stimulate innovation

The challenges of innovation rest in the systemic nature of cities

- Water systems are a city 'lifeline'
- Deeply interdependent with other systems
- Digitisation offers efficiency and innovation potential
- So too, new sustainable equipment & technologies

→ HOWEVER, INNOVATION IS CONSTRAINED
WHY? ... & HOW TO RESOLVE?

2 Leadership & Governance

General Enablers

- Policy Regulation & Legislation
- Societal Insight, & Participation
- City-Wide Planning
- Sustainability & Resilience
- Asset Stewardship
- Business Models & Financing
- Performance Management

3 Digital Transformation

- Digital Core Common Services
- Connectivity
- Interoperability & Standards
- Data Mgmt. & Analytics
- Security & Privacy
- Urban Data Platforms
- Disruptive Technologies

Cities as complex, dynamic, interdependent, systemic organisms, with unique anatomies, and common DNA

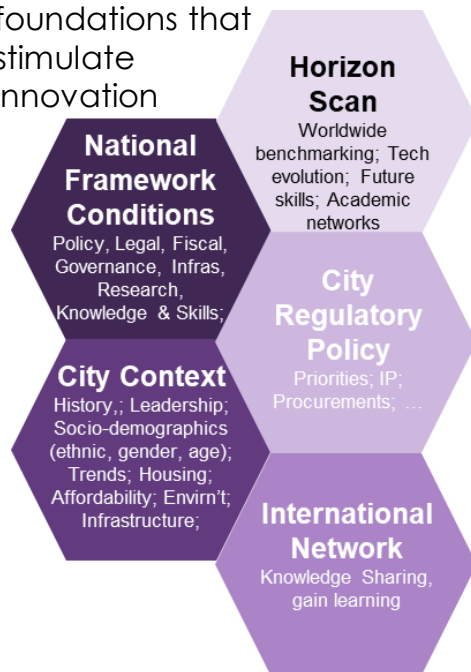

1 City Responsibilities

- Built Environment
- Mobility & Logistics
- Water & Waste Water**
- Energy Management
- Telecommunications
- Waste Management
- Health & Wellbeing
- Public Safety
- Education & Skills
- Economic Development
- Sports, Culture & Tourism
- Contemporary Emerging Topics

A holistic 4-pillar framework

1. Framework Conditions

The contextual foundations that stimulate innovation

2. Network Enablement

Digital Enablement
Infrastructure; Connectivity; eServices; Data Policy & Management

Proposition & Service Management
Promise; Channels;

Business Engagement
BigCo/SME; Proximity; Tools; Intelligence; Events; Competitions; Participation; Co-financing; ...

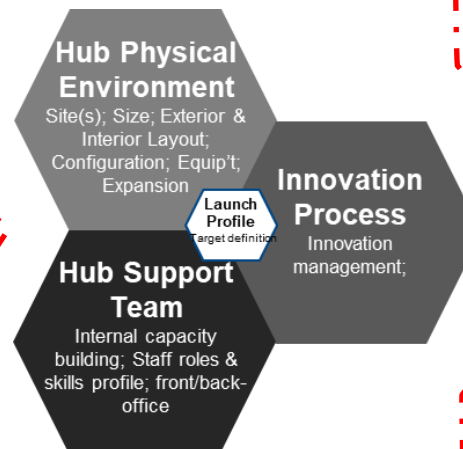

Community Engagement
Tools; Insight; Participation; Data Privacy

Academic Engagement
Collaborative research; mentoring coaching; evaluation

Collaboration between stakeholders to enable novel ideas and solutions

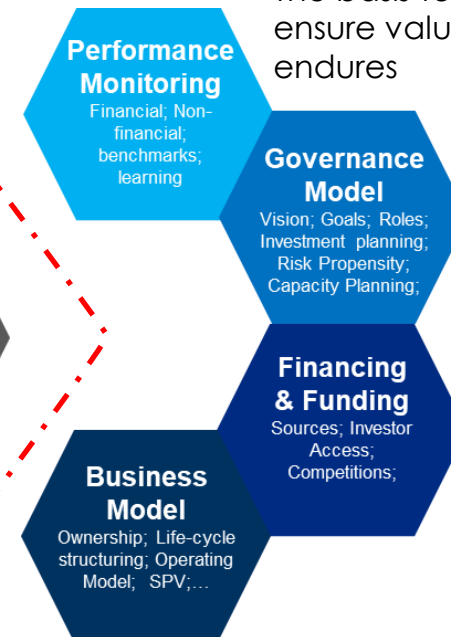

3. Innovation in Action

Effectively combining a portfolio of physical hubs, and human capital

4. Sustaining Value

The basis to ensure value endures

A holistic 4-pillar framework - that can be assessed city-wide

1. Framework Conditions

The contextual foundations that stimulate innovation

2. Network Enablement

3. Innovation in Action

Effective portfolio and human capital

4. Sustaining Value

7 steps to more purposeful & productive Urban Innovation

1. Get the topic on the agenda: Discuss amongst city leaders why innovation matters, and only move once that is recognised.

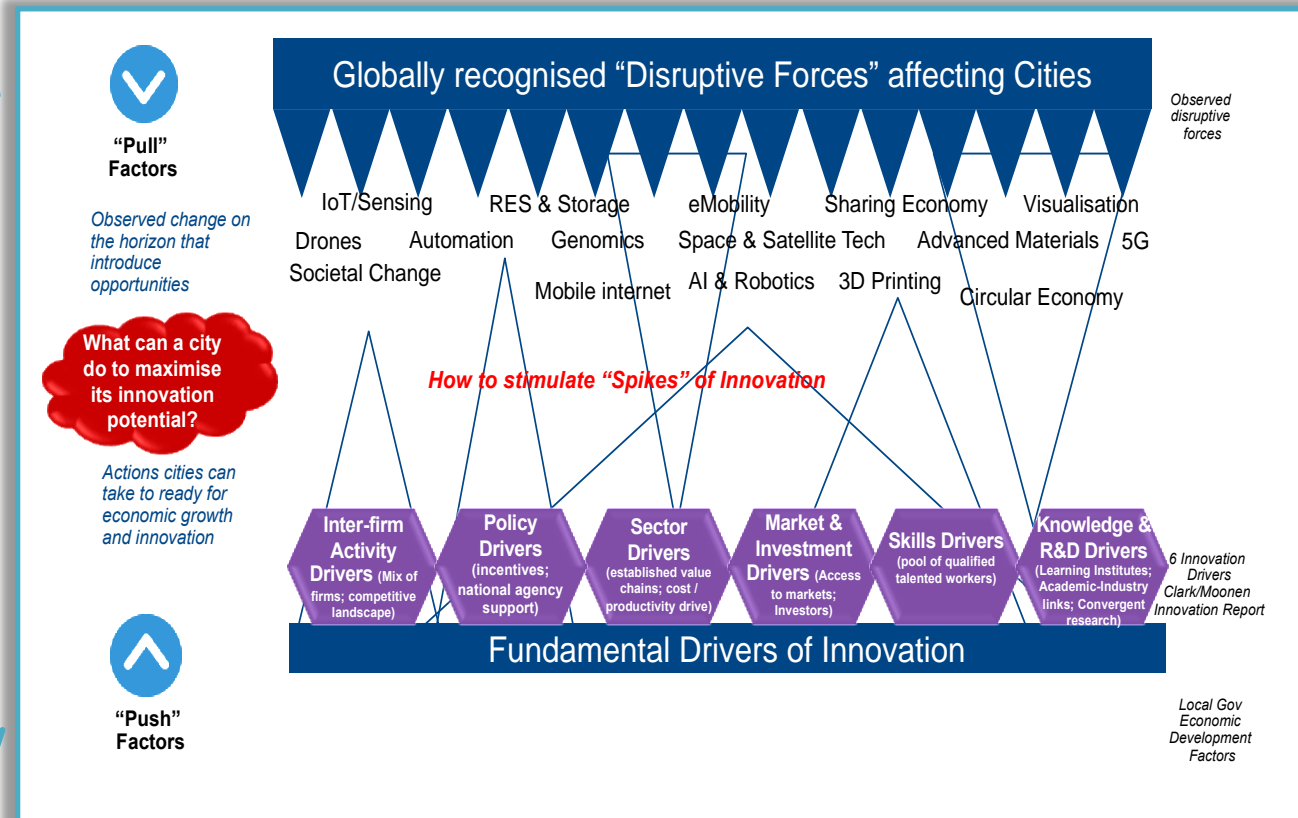

2. Assess the innovation state-of-play for the city: Perform an honest appraisal of the state-of-play against the innovation blueprint through a pragmatic analysis and/or metrics; and identifying key areas for improvement.

3. Perform a 'Horizon Scan' to inform the thinking: Look to the new opportunities that emerge on the horizon, and connect these to more proactive plans for the present.

4. Make the purpose and goals very clear!: Get a common meaning for the term amongst stakeholders; identify where the city legitimately and competently can lead through innovation; and work with others too.

5. Determine the focus and priorities: Address the city systemically, and pragmatically. Stimulate dialogue around a pragmatic city model to assess potential priorities and explore interdependencies.

6. Set targets and select indicators: Build collective ownership of audacious goals, and identify indicators to monitor.

7. Consider appointing a Chief Innovation Officer: with clear accountability & dedicated resource for pan-city innovation; to put focus on direction; streamline operations, & develop the right portfolio.

RESCCUE experience reinforces an inter-dependent approach

Thank You!
